

BIPIN PAUDEL

Backend Developer | Java | Spring Boot

Pokhara, Nepal • +977 9827173294 • paudelbipin05@gmail.com • [GitHub](#) • [LinkedIn](#)

TECHNICAL SKILLS

Languages: Java, SQL, TypeScript

Frameworks & Libraries: Spring Boot, Spring Security, Spring Data JPA, Hibernate, JWT, OAuth2, Redis, REST APIs, JavaMailSender, Lombok, React

Databases: MySQL, PostgreSQL

Testing: JUnit 5, Testcontainers, WireMock, MockMvc

Tools: Git, GitHub, Maven, Postman, Docker, Swagger/OpenAPI, IntelliJ IDEA

PROJECTS

Cura – Clinic Management System

Java 21, Spring Boot 4, Spring Security, JWT, OAuth2, Spring Data JPA/Hibernate, PostgreSQL, Redis, Swagger/OpenAPI | [GitHub](#)

- Built a clinic management backend exposing 76 REST endpoints over 13 JPA entities for four user roles (admin, doctor, receptionist, patient), with stateless JWT authentication, Google OAuth2 login, and role-scoped URL authorization enforced in the Spring Security filter chain
- Integrated Khalti and eSewa payment gateways behind a Strategy and Factory design, implementing HMAC-SHA256 request signing, server-to-server transaction initiation, and callback verification for two structurally different provider flows
- Cut repeated database reads by caching doctor profiles, medical services, and photo lookups in Redis using TTL expiry combined with event-driven cache eviction, and implemented dynamic appointment search with the JPA Specification API
- Designed a transactional account deactivation and self-service reactivation flow using 24-hour expiring UUID tokens with security-safe generic error responses, and covered the payment and reactivation flows with 18 tests driving a containerised PostgreSQL through Testcontainers, WireMock, and MockMvc

VoiceOver – Text-to-Speech REST API

Java 17, Spring Boot, RestTemplate, Multipart File Handling, ElevenLabs API | [GitHub](#)

- Built a REST API that converts plain text or uploaded text files into MP3 audio, reading multipart uploads through a buffered input stream and integrating the ElevenLabs TTS API over HTTP using RestTemplate
- Returned generated audio as a downloadable MP3 through `ResponseEntity<Resource>`, setting `audio/mpeg` content type and `Content-Disposition` attachment headers
- Handled external API failures and invalid file uploads through custom exceptions (`ExternalApiError`, `InvalidFileException`), keeping controllers clean and business logic isolated in the service layer

WeatherHub – Secure Email Notification & Weather Broadcast Backend

Java 17, Spring Boot, Spring Security, JWT, OAuth2, Spring Data JPA, PostgreSQL, Redis, JavaMailSender | [GitHub](#)

- Built a stateless authentication system supporting JWT and OAuth2 login with role-based access control (USER / ADMIN) using Spring Security
- Implemented cache-first broadcast logic that serves weather data from Redis when present and otherwise fetches from an external API, caches the result under a configurable TTL, then broadcasts weather-enriched emails to all registered users via JavaMailSender

EXPERIENCE

Software Developer Intern — Foodmood Pvt. Ltd., Pokhara

Mar 2026 – May 2026

- Developed and maintained full-stack web applications using Spring Boot on the backend and Angular on the frontend
- Designed and implemented RESTful APIs for client-server data exchange, and built responsive interfaces with Angular components, services, and routing
- Integrated backend services with MySQL, designing relational schemas and writing optimized SQL queries
- Implemented authentication and authorization mechanisms to secure user access across application endpoints
- Debugged, tested, and optimized application performance to improve system reliability, collaborating with senior developers using Git and agile practices

EDUCATION

BSc (Hons) Computing — Informatics College Pokhara | Expected 2026
